

28 February 2019

Dear Organizers, Co-organizers, Participants and Jury Members:

It was honour for me to become the part of "Black Sea Science 2019" student Competition. I have joined it only in the final evaluation stage but I saw how much energy, time and experience was devoted to every single student work. The process of the evaluation seemed very transparent as it was not done by one person but by the qualified jury board.

Quality of the submissions and the directions of covered topics were the callings of the modern technological challenges. The number of applications showed that students' interest is increased in the direction of science. This fact is more than welcome for the whole academic community.

I would like to express my expectation that these scientific papers evaluated for "Black Sea Science 2019" will become the solid base for the future researches and all partner universities involved in the project will continue working on urgent challenges in broader context in future.

Sincerely,
Dr Tamar Aslanishvili
